SOLUTIONS FOR BUSINESS

HUNTRESS

MANAGED DETECTION AND RESPONSE · POWERED BY HUNTRESS

Who's watching your network at 2 a.m.?

Attackers work nights, weekends and holidays. Huntress security analysts watch your computers and Microsoft 365 accounts around the clock, and Pinnacle's Evansville team handles the cleanup.

What the 24x7 SOC watches

Endpoints
Windows and Mac workstations and servers

Identities
Microsoft 365 sign-ins, mailbox rules and risky logins

Logs
SIEM collection from firewalls and servers

People
Security awareness training and phishing tests

When something is found

- **Real analysts review it,** not just an automated alert.
- **Compromised accounts locked** and sessions revoked.
- **Hidden footholds** hunted and removed.
- **Infected computers isolated** before it spreads.
- **Ransomware canaries** that flag encryption early.
- **A plain-English report** of what was done.

How Pinnacle delivers it

1 Deploy
Huntress agents rolled out through our monitoring tools, no downtime.

2 Protect
Microsoft 365 identity monitoring and staff training added.

3 Watch
The 24x7 SOC monitors, with Pinnacle as your escalation.

4 Respond
Our engineers finish the remediation and walk you through it.

Antivirus alone is not enough anymore.

Most attacks now use stolen passwords and normal admin tools that antivirus misses. Cyber insurance carriers increasingly expect a human-led SOC.
