FIREWALL REFRESH · PALO ALTO NETWORKS

Your firewall is the front door. When did you last check the lock?

Most small-business firewalls get installed, licensed once and forgotten. Then the subscriptions lapse, the firmware falls behind or the model reaches end of life, and everyone assumes the door is still locked. Pinnacle designs, installs and manages Palo Alto Networks firewalls, including the PA-500 series built for small offices and branches.

Three questions about your firewall

01 Do you know when your firewall model reaches end of sale and end of support?

02 Are your threat prevention and URL filtering subscriptions current, or did they lapse at renewal?

03 When was the firmware last updated, and who reviewed the logs afterward?

What Pinnacle puts in place

Next-generation protection
App-ID and threat prevention inspect traffic by application, not just by port number.

Sized for your office
PA-500 series models fit small offices and branches, with PoE models that power access points and phones.

Subscriptions kept current
We track renewals so threat, URL and DNS security never lapse quietly.

Firmware on a schedule
PAN-OS updates are tested and applied in planned windows, not whenever someone remembers.

Designed with your network
VLANs and policies built alongside your switching and Wi-Fi, so guests, phones and servers stay apart.

Watched, not just installed
Alerts and log review are part of your managed agreement.

Why Pinnacle: We quote firewalls the way we quote servers: one complete, fixed price for hardware, licensing and setup. If we leave something out, we supply it at no charge.

Find out if your firewall is still protecting you.

Ask for a no-cost firewall check. We will confirm your model's support dates, subscription status and firmware level, and tell you whether to renew or replace.
