NETWORK AND WI-FI REFRESH · UBIQUITI UNIFI

How old is your network equipment, really?

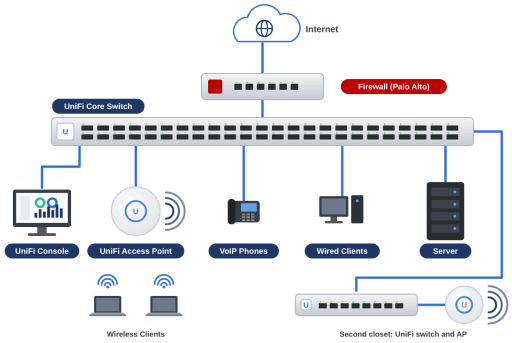

Switches and access points are easy to forget. They sit in a closet or on the ceiling and keep blinking long after they stop keeping up. If yours went in before 2020, it is time for a refresh, and UniFi makes a full refresh of switching and Wi-Fi affordable.

Three quick questions

01 Was your Wi-Fi installed before 2020? If so, it is almost certainly Wi-Fi 5 or older.

02 Is any switch or access point past the end of its manufacturer's firmware support?

03 Has someone added a small switch under a desk because the closet ran out of ports?

Why refresh your network and Wi-Fi now

Your devices are newer than your Wi-Fi

Laptops and phones bought in the last few years support Wi-Fi 6E or Wi-Fi 7. An older access point holds them to its own speed.

The 6 GHz band is open road

Wi-Fi 6E and Wi-Fi 7 add the 6 GHz band: more channels and far less interference from the neighbors. Older access points cannot use it.

Unsupported gear stays unpatched

When firmware updates stop, security holes stay open. Cyber insurance applications and audits increasingly ask about it.

More devices need power

Access points, cameras and desk phones draw power from the switch. Older switches run out of PoE budget.

The closet becomes the bottleneck

New access points can move more than 1 Gb of traffic. UniFi switches with 2.5 Gb and 10 Gb uplinks keep up.

Year-end timing

Equipment bought and placed in service by December 31 may qualify for Section 179 on your 2026 taxes. Ask your tax advisor.

Why Pinnacle: We walk the building before we quote, design around your Palo Alto firewall, and manage every switch and access point from one UniFi console. You get one complete, fixed price; if we leave something out, we supply it at no charge.

Find out how old your network really is.

Ask for a no-cost network walk-through. We will inventory your switches and access points, check coverage, and show you what to replace first.
